.45 A: Please try 'delete and re-create partition' option on the partition where the WINDOWS 10 is installed. Q: Trying to check the number of times a button is pressed to write a number to a text file I'm trying to create a basic stock data trading calculator. I'm trying to make it so when a button is pressed it writes the number of times it's been pressed to a text file.

Example: When you press the button you have to enter the amount of shares in your stock (only numbers). How many shares you have is used to determine how many times you press the button (hopefully this makes sense). I think the problem is with the code I have but I'm not sure what the problem is. Also I'm not great with coding (learning) and I'm trying to learn from scratch.

Any help would be great. Thank you Here is my code: using System; using System.Collections.Generic; using System.ComponentModel; using System.Data; using System.Drawing; using System.Linq; using System.Text; using System.Windows.Forms; using System.IO; namespace StockData { public partial class Form1 : Form { public Form1() { InitializeComponent(); } private void button1_Click(object sender, EventArgs e) string name1 = "stockdata"; string f = "stock.txt"; string text = ""; //Check if it's open. if (!File.Exists(f)) { //File not opened. 82157476af
